TWG14: UNIVERSITY MATHEMATICS EDUCATION

Group A:
Leader: Alejandro S. González-Martín
Coleaders: Imène Ghedamsi, Alon Pinto, Fabrice Vandebrouck

Group B:
Leader: Irene Biza
Coleaders: Jason Cooper, Thomas Hausberger, Olov Viirman

PAPERS

0002	Kristina	Juter	University students' perceptions of concept relations and preferred representations in calculus
0058	Aaltje Berendina	Aaten	Undergraduates' reasoning while solving integration tasks: discussion of a research framework
0116	Regina	Ovodenko	To be or not to be an inflection point
0183	Imène	Ghedamsi	A micro-model of didactical variables to explore the mathematical organization of complex numbers at upper secondary level
0207	Ingolf	Schäfer	Students' view of continuity – An empirical analysis of mental images and their usage
0210	Marianna	Bosch	Teaching didactics to lecturers: a challenging field
0212	Eivind	Kaspersen	The association between engineering students' self-reported mathematical identities and average grades in mathematics courses
0231	Abraham	Kumsa	Obstacles to students' understanding of the limit concept
0240	Ninni Marie	Hogstad	Evaluating a digital tool for applying integrals in a kinematic simulation
0324	Ofer	Marmur	What can calculus students like about and learn from a challenging problem they did not understand?
0327	Barbara	Jaworski	Theorising University Mathematics Teaching: The Teaching Triad within an Activity Theory Perspective
0332	Maria	Meehan	"What you see and don't see, shapes what you do and don't do": noticing in first year mathematics lectures
0346	Chiara	Andra'	Freshmen engineering students: are they all the same?
0349	Pierre-Vincent	Quéré	French engineers' training and their mathematical needs in the workplace: articulating tools and reasoning
0361	Marinos	Anastasakis	Exploring the types of tools used by engineering undergraduates
0367	Frank	Feudel	Students' interpretation of the derivative in an economic context
0377	Alejandro S.	González-Martín	How are Calculus notions used in engineering? An example with integrals and bending moments
0424	Lynn	Farah	The organization of study in French business school preparatory classes

0045	Margo	Kondratieva	A praxeological approach to Klein's plan B: cross-cutting from Calculus to Fourier Analysis
0046	Julie	Jovignot	Praxeological analysis: the case of ideals in Ring Theory Praxeological analysis: the case of ideals in Ring Theory
0109	Kirsten	Schmitz	Access to conceptual understanding - summer courses for linear algebra and analysis after the first semester
0110	Ragnhild Johanne	Rensaa	Approaches to learning of linear algebra among engineering students
147	Ronja	Kürten	Self-Efficacy of Engineering Students in the Introductory Phase of Studies
0148	Juliane	Püschl	Identifying discussion patterns in mathematical tutorials
0167	Marios	Ioannou	Investigating the discursive shift in the learning of Group Theory: Analysis of some interdiscursive commognitive conflicts
0179	Thomas	lecorre	Q^2 a game used in a task design of the double quantification
0188	Olov	Viirman	From ritual to exploration: The evolution of Biology students' mathematical discourse through Mathematical Modelling activities
0199	Igor'	Kontorovich	When lecturers disagree on mathematics: The case of the root concept
0224	Faïza	Chellougui	The proof in formalism: Case of letters' logical status
0239	Athina	Thoma	Discursive shifts from school to university mathematics and lecturer assessment practices: Commognitive conflicts regarding variables
0242	Jason	Cooper	A Mathematics Educator and a Mathematician Co-Teaching Mathematics – Affordances for Teacher Education
0244	Anja	Panse	How We Can Begin to Overcome Students' Difficulties in Reading Mathematical Texts
0264	Chiara	Andra	An analysis of freshmen engineering students' notes during a preparatory math course
0276	Irene	Biza	"Points", "slopes" and "derivatives": Substantiations of narratives about tangent line in university mathematics students' discourses
0325	Helge	Fredriksen	Exploring Tensions in a Mathematical Course for Engineers utilizing a Flipped Classroom Approach
0347	Aurora	Fernández-León	How mathematicians conjecture and prove: an approach from mathematics education

0427	Jörg	Kortemeyer	The interface between mathematics and engineering - problem solving processes for an exercise on oscillating circuits using ordinary differential equations
0455	Alon	Pinto	Math teaching as jazz improvisation: Exploring the 'highly principled but not determinate' instructional moves of an expert instructor
0502	Reinhard	Hochmuth	"Qualitative Learning Jumps" and "Mathematical Organizations" as Analytical Lenses for Discussing Transition Issues Regarding Derivatives
0511	Katherine	Conway	Retention and access in online mathematics and science courses
0522	Michael	Kallweit	Engineering mathematics between competence and calculation

0406	Amalia-Christina	Bampili	The transition from high school to university mathematics: a multidimensional process
0417	Megan	Wawro	Meta-representational competence with linear algebra in quantum mechanics
0501	Michael	Liebendörfer	A framework for goal dimensions of support measures in university mathematics
0559	Tobias	Mai	A vector is a line segment? - Students' concept definitions of a vector during the transition from school to university
0573	Laura	Branchetti	Secondary school teachers' choices concerning the transformation of knowledge in the didactical transposition of real numbers and continuum in the high school
0581	Sepideh	Stewart	Navigating through the mathematical world: Uncovering a geometer's thought processes through his handouts and teaching journals

POSTERS

0060	Irene	Duranczyk	Algebra instruction at community colleges: An exploration of its relationship with student success.
0166	Stephanie	Treffert-Thomas	Getting into university: From foundation to first year engineering
0203	Olga	Timcenko	Teaching mathematics to non-mathematicians: the case of media technology undergraduate students
0222	Diarmaid	Hyland	Investigating students' difficulties with differential equations in physics.
0359	Fatma	Fattoum	Reflection on didactical design for action: the case of convergence of sequences and of complex numbers
0447	Thomas	Stenzel	Supporting university freshmen - an intervention to increase strategic knowledge
0483	Anthony	Cronin	In what ways do lecturers receive and use feedback from large first year mathematics classes?
0498	Maria	Slavickova	Developing conceptual knowledge by using ICT on mathematics lessons
0583	Hichem	Khechine	Connections between approximating irrationals by a sequence of decimals and introducing the notion of convergence

0049	Peter	Stender	Heuristic Strategies in Mathematics Teacher Education
0085	Matthias	Brandl	Interactive mathematical maps for de-fragmentation
0198	Mitsuru	Kawazoe	A practical study of a design of university mathematics courses for the humanities and social sciences students
0363	Magdalini	Lada	The Flipped Learning Model in teaching Abstract Algebra
0499	Inen	Akrouti	The impact of the choice of teacher on student learning
0574	Gloria Angélica	Moreno Durazo	Mathematics and medicine: a study of variational thinking and language
0622	Kouki	Rahim	Taylor Series: From history to Teaching
